What is the wps button on my printer

Solution Wireless Setup Using WPS (Wi-Fi Protected Setup) If an Error Screen Appears Wireless Setup Using WPS (Wi-Fi Protected Setup) Before Starting Wireless Connection Setup REFERENCE Make sure that the printer is turned on. 1. Press the [Setup] button (A) on the printer. 2. Use the or button (B) to select [Wireless LAN setup]. Press the [OK] button. 3. When the screen left above is displayed, go to the step 4. When the screen right above is displayed, go to the step 5. 4. Press and hold the WPS button on the wireless router. -> Go to 7. 5. Select [WPS (Push button)]. Press the [OK] button. 6. Press and hold the WPS button on the wireless router. REFERENCE For details on pressing the WPS button, refer to the wireless router manual. 7. Press the OK button on the printer within 2 minutes. REFERENCE If a different screen appears, see "If an Error Screen Appears" below in this page and follow the instructions there. If an Error Screen Appears Multiple wireless routers detected appears The screen appears when connections are being attempted from multiple wireless routers simultaneously. Wait for a while, then configure WPS settings again. Press the WPS button on only one wireless router. Failed to connect appears The screen appears when an error occurs. Check the wireless router settings, then configure WPS settings again. Timeout error appears The screen appears when WPS setup was not completed within a specified time. Is the network device (router, etc.) turned on? If the network device is already turned on, turn it off, then turn it back on. Step 1 1. Press the [Setup] button (A) on the printer. Step 2 1. Select [Wireless LAN setup] and press the [OK] button. Step 3 1. Please press the [Stop/Reset] button and the following screen will be displayed. 2. When the above screen displayed, press the [OK] button. The printer will now search all available wireless networks in the immediate vicinity. (##### indicates the available network names) 3. Use the arrow keys to select the name of your network (also referred to as SSID) and press the [OK] button twice. If you are unsure of the name of your wireless network (SSID), it may be on a printed label attached to your access point or by checking the name of the network your computer is connected to. If you cannot see your network listed, use the arrow keys to select [Search again] and press the [OK] button. 4. When the following screen appears, using the numeric buttons on the machine, you can enter the security passphrase of your wireless network. The machine has three input modes: uppercase mode, lowercase mode, and numeric mode. Press the button to switch to the uppercase mode (.A), lowercase mode (.a), or numeric mode (.1). (Displayed in top right of screen). For example, in the uppercase mode, pressing the button once will give you "A" and pressing the button twice will give you "B" etc. If you have 2 characters contained within the same button, press the arrow key to advance to the next character. If you accidentally make a mistake, you can delete the character by pressing the key. Once you have finished entering the passphrase, press OK. The following screen will appear: Press the [OK] button. This concludes the Wi-Fi setup procedure. Please now proceed by installing the software to make the most out of your PIXMA MX534. If you do not have the installation CD that came with your product, please download the manuals and software to continue. If the wireless setup is still failing after following this guide, please contact us for further assistance. Whenever you connect the HP printer on Windows 10 you will get a prompt "Enter WPS Pin for HP Printer". If you are using an HP printer and trying to install the printer on windows 10, then you might need a WPS Pin to connect the HP printer to a wireless network. Because HP Printers use WPS technology to connect with wireless gadgets. WPS is the latest technology that is used by various devices to communicate with each other. It helps you to create a secure connection between devices. WPS Pin is safe, secure, and faster than a USB connection.What is the WPS Pin?WPS Pin is a unique 8- digit number that is generated by the HP printer for wireless connection with routers. It only works with a wireless router. WPS Pin is like a secret code between your own devices. This WPS Pin will protect your printer from unknown users like your neighbors and hotels. For your kind information let me tell you this WPS Pin technology is used by every printer company in the future. So find WPS Pin for the printer and connect it wirelessly.Where to find the WPS Pin on HP Printer?Now the big question is "where do I find the WPS for my HP Printer ?" In most HP Printers like HP Envy 4520, HP Officejet 4650, HP Laserjet WPS Pin is Located on the printer screen. If you take a look at the printer you will find a small screen on which the WPS pin is generated for wireless connection. However, there are some other HP printers like HP Deskjet 2600, hp Deskjet 2652 in which we don't have a screen. Though, you need a WPS pin for these HP printers too. So, to solve this WPS Pin problem for all HP Printers we have two types of options.Types of WPS Connection for HP PrinterBasically, on every HP printer, you can find any of these options to connect the printer wirelessly.Push Button (For non-screen Printers)WPS Pin (To Screen enabled Printers)Connect HP Printer Via WPS ButtonIf you are using HP Printer on which you don't have a screen or control panel then use this method to connect the printer to the computer.If your printer is Off, then turn the printer ON, or if it is ON then Restart it before moving to the next step.Now take a look at the printer you will find a wireless button or Icon.Press the Wireless Button on the printer.After that, you will see a Blue or Green Light starts flashing.Go to your wireless Router:At the backside of your router, you will find a WPS Button.Press and Hold that WPS button for 3-4 sec.WPS light will start blinking on the router itself.Wait for 2-3 mins Both the lights on the printer and Router stop blinking.Now Your HP printer wirelessly connected to the computer.If you are using an HP printer with Screen or Control Panel then follow these easy steps.Turn ON the printer, if it is ON then Restart it before moving to the next step.Go to the HP printer control panel or screen and Press the Wireless Button.Now the Wireless BLUE light will start blinking.On the printer screen, you will find the option "WiFi Protected Setup" and select "Push Button".Go to your wireless Router:At the backside of your router, you will find a WPS Button.Press and Hold that WPS button for 3-4 sec.WPS light will start blinking on the router itself.Wait for 2-3 mins Both the lights on printer and Router stop blinking.Take a look at the printer screen "Connection Established".Now Printer is connected with the wireless network with WPS Button.Connect HP Printer Via WPS PinIf you are using an HP printer on which you have a screen or control panel then you can find the WPS pin for your HP Printer.Turn ON the printer, if it is ON then Restart it before moving to the next step.Go to the HP printer control panel and press the Wireless Button.Now the Wireless BLUE light will start blinking.On the printer screen, you will find the option "WiFi Protected Setup".Go to "WiFi Protected Setup" and select "WPS PIN".Now a WPS Pin will be generated on your HP Printer.Remember this WPS pin will be there on the screen for 8-10 sec, after that you have to generate a new pin if it's not working.Now Enter the WPS pin for your HP printer on the computer screen.Congratulation WPS Pin has been generated and your HP Printer is connected wirelessly with your Windows 10 computer.(FAQs) Frequently Asked Questions for WPS Pin Turn on the HP Printer.Go to the control panel screen of your HP printer.Press the 'Settings' option and select the Wireless button.Press the Wi-Fi Protected Setup.Now Follow the instructions appearing on the HP Printer screen carefully.Click on the 'WPS PIN' option and a 8 digit PIN appears on the HP Printer screen.
